SUBJECT INDEX TO VOLUME 51

Acyclonucleosides, conformation features, 737
Acyclovir, synthesis/structure, 737
Adenosine phosphates, neptunium(V) complexation by, 701
Alkaline earths, complexation of trivalent lanthanide ions and, 701
Ammine/amine platinum (II) and (IV) complexes, synthesis/antitumor activity of, 677
Antimicrobial activity, isoorotic and 2-thioisoorotic acids, 613
Antitumor activity, ammine/amine platinum(II) and (IV) complexes, 677
Ascorbate oxidase, copper removal from, 641
Aspartyl, copper(II) complexes of dipeptides with, 715
Azotobacter vinelandii ferritin, characterization, 745
Bacterial ferritin, characterization, 745
Blue oxidases, copper abstraction from, 641
Cacruloplasmin, copper removal from, 641
Cell membranes, plasma selenoprotein P binding to, 707
Cisplatin analogs, 677
Cobalt(III) complexes, carbethoxylation of, 727
Copper, dicopper(I), encapsulated, 633
Copper(II)
  copper(II)-zinc(II)-superoxide dismutase, 655
  diaquadichlorobis, synthesis/structure, 737
  dipeptides, 715
Crystal structure
  copper(II)-zinc(II)-superoxide dismutase, 655
  isoorotic and 2-thioisoorotic acids, 613
  zinc-sulfathiazole complex, 689
Cytochrome *c*
  F82Y;C102T variant of, 663
  reduced, 649
Dicopper(I), encapsulated, 633
Diethylpyrocarbonate, carbethoxylation of coordinated histidine by, 727
Dipeptides, copper(II) complexes of, 715
Ferricytochrome *c*, stabilization of, 649
Ferritin, bacterial, characterization, 745
F82Y variant of cytochrome *c*, 663
Glutamyl, copper(II) complexes of dipeptides with, 715
Histidine, diethylpyrocarbonate and carbethoxylation of, 727
Histidyl residues, copper(II) complexes of dipeptides with, 715
9-[(2-hydroxyethoxy)methyl]guanine, synthesis/structure, 737
Isoorotic acid, transition metal complexes with, 613
Laccaser, copper removal from, 641
Lanthanide ions, trivalent, complexation of alkaline earths and, 701
Metal complexes
  sulfamilamide derivatives, 689
  transition, 613
Neptunium(V), adenosine phosphate complexation of, 701
Oxidase
  ascorbate, copper removal from, 641
  blue, copper removal from, 641 Oxidation, dicopper(I), 633
Phenylalanine-82, cytochrome *c* and, 663
Plasma selenoprotein P, cell membranes and, 707
Platinum complexes, ammine/amine, 677
Proteins, stabilization of, 649
Redox state stabilization, 649
Selenoproteins, cell membranes and, 707
Spectroscopic studies
  azobacter vinelandii ferritin, 745
  carbethoxylation of histidine by diethylpyrocarbonate, 727
  copper(II) complexes of dipeptides, 715
  copper(II)-zinc(II)-superoxide dismutase, 655
  isoorotic and 2-thioisoorotic acids, 613
  zinc-sulfathiazole complex, 689
Sulfanilamide derivatives, metal complexes of, 689
Superoxide dismutase, model compound of copper(II)-zinc(II)- , 655
2- Thioisoorotic acid, transition metal complexes with, 613
Tissue membranes, plasma selenoprotein P and, 707
Tyrosine, cytochrome *c* and, 663
Zinc-sulfathiazole complex, crystal structure, 689
Zinc(II), copper(II)-zinc(II)-superoxide dismutase, 655
